

Motivation

Modern design enclosures of machines in many cases complicate their operation and maintenance. The aim is to ensure ergonomic operation and easy removal of parts of the covering when carrying out service work.

Description

The ingeniously designed covering and layout of the individual groups on the WHT 110/130 machines provides excellent ergonomics, which facilitates machine operation (excellent accessibility of controls and overall operator comfort) and speeds up maintenance. Key areas on the machine are quickly accessible as the covers can be easily removed/opened.

Keeping the workplace clean is now also a simple matter, as dirt and coolant are efficiently removed from the work area thanks to the shaped covers and integrated chip conveyor.

Benefits

- Comfortable machine control
- Significant improvement of machine service work efficiency
- Advanced and functional design
